

*We believe everyone has
the right to safe and
accessible drinking water.*

OVERVIEW PRESENTATION

Last Updated:
September 2024

*"Where you are
born shouldn't
determine
whether you live
or die."*

*The problem? Lack
of safe drinking
water causes 80% of
children's diseases
and death*

*Half the hospital beds
in high-risk areas hold
people with water-
related diseases.*

*Over 2 BILLION
people lack safe
drinking water and
over 4 BILLION lack
safe sanitation*

*And every 30
seconds someone
dies from a water-
borne illness.
(usually a child)*

THE FEMALE FACTOR

Girls carry the burden of the family's water needs and are exposed to physical dangers every day while carrying it – resulting in less time in school and a loss of education

*The greatest protection
against disease and death
is...*

SAFE drinking water!

*And you can help us
provide it.*

OUR 3-PHASE APPROACH

Lifewater Canada is a wonderful way to save lives.

1. TRAIN AND
EQUIP LOCAL
WORKERS

2. LOCAL TEAMS
COMPLETE
THE WORK

3. DONORS MAKE
PROJECTS
AFFORDABLE

1. TRAIN AND EQUIP LOCAL WORKERS

*Taking it to the next step!
Local Partners share
knowledge with each other
in Lifewater Canada's first
International Drilling
Conference*

"Tom & Jerry" are the given names for the two trucks you see in these photos. Tom is the pickup truck that travels with Jerry - the drill rig.

Jerry is the first drilling rig of its kind and an engineering feat; it enables remote areas and those with difficult terrain to be reached and have safe water provided. Jerry is compact and agile for the terrain, while powerful enough to drill in the hard rock formations in the region. Designed by Lifewater Canada for our partners in Kenya, it serves as the prototype for similar rigs now built in Nigeria and planned for Liberia.

2. LOCAL TEAMS COMPLETE PROJECTS

3. DONORS MAKE PROJECTS AFFORDABLE

*For villagers earning
\$1 a day, a \$5,500
well may as well
cost \$5 million.*

THE WELL CARETAKER

Every water project since 1995 has included the training of a *Well Caretaker*. Not all have carried on as intended, but the position helps ensure the pump lasts longer, the water remains safe, and conflicts do not escalate among villagers waiting in line.

Key responsibilities include:

- securing the well by locking/unlocking it during hours of operation
- monitoring the pump while it is in use (i.e., "full strokes" only)
- ensuring "social etiquette" is practiced at the well and while waiting in line
- evaluating the pump to ensure it is performing as it should and contacting someone to repair it when needed
